

DID YOU KNOW?

The impact of mental health AND Dyslexia on gaining job outcomes

From a sample of 2500 Work Choice candidates.
MH= Those reporting anxiety, depression or panic attacks

Key Message:

It is important to understand the profile of the individual candidates to ensure you are providing appropriate support. However, not everyone comes neatly labelled. Training needs to be provided for all staff relating to potential mental health challenges.

In 2084 candidates 54% reported one or more mental health conditions and 13% reported learning difficulties such as Dyslexia.

They were followed through to job outcomes who reported any of the following: *panic attacks, anxiety, depression, dyslexia.*

The results of this showed that those with Dyslexia alone didn't decrease their job outcomes significantly but if this was present alongside mental health challenges it showed a much greater burden in gaining a job.

No MH or Dyslexia

**IMPACT
FACTOR 2x**
